

Solar inverter remote modulation method

Overview

These inverters use the pulse-width modification method: switching currents at high frequency, and for variable periods of time. For example, very narrow (short) pulses simulate a low voltage situation, and wide (long pulses) simulate high voltage. The three most common types of inverters made for powering AC loads include: (1) pure sine wave inverter (for general applications), (2) modified square wave inverter (for resistive, capacitive, and inductive loads), and (3) square wave inverter (for some resistive loads) (MPP Solar, 2015). The working principle of. Abstract: The work presented here is an attempt to study on various types of modulation strategy for new proposed solar power generation system. Solar power generation system is composed of DC-DC converter and a seven level inverter.
