

# Solar panels installed in Ukrainian courtyards

## Overview

---

Under the new rules, solar power systems installed on roofs and facades will require only a technical inspection report for the building. No additional licensing or registration procedures from state architectural and construction authorities will be required, Prime Minister Yulia. This report explores the current policy landscape for distributed solar PV in Ukraine and outlines three potential policy options to accelerate the deployment of this technology. It focuses on expanding the capacity of distributed solar PV to achieve the modelled results from IEA report Empowering. Ukraine possesses significant potential for renewable energy, particularly solar photovoltaic (PV) and wind power. Since the beginning of the full-scale Russian invasion and targeted attacks on the energy sector, decentralised solar energy and residential solar panel installation securing the. Almost 13% of the country's pre-war solar generation capacity was located in territories now controlled by Russian forces, explained Olga Sukhopara, former director of development at the Ukrainian Association of Renewable Energy (UARE). These massive energy projects will power millions of homes and help Ukraine break free from fossil fuels. Ukraine has set an ambitious target to build 94 gigawatts of solar power capacity by 2050. Even as relentless attacks threaten its energy infrastructure, Ukraine is demonstrating remarkable resilience by significantly increasing its solar power capacity.
