

# Solar power generation building area agent

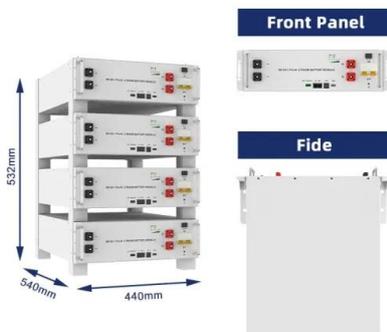

## Overview

---

A solar owner's representative (also known as Solar Owner Rep or Solar Owner's Rep) is a building owner's right hand, guiding them through the process and ensuring a successful solar energy project. Applying the role of an agent for solar power generation involves several key steps: 1. Understand the solar industry thoroughly and stay updated on technological advancements, 2. Develop effective marketing. One key element of deciding to build a renewable electricity project is identifying a suitable location for the project. We specialize in wind power generation systems, photovoltaic power generation systems, wind-solar hybrid power generation systems, battery energy storage. There are a number of mapping services that have been developed by SETO awardees that will help you determine if your roof is suitable for solar and can even provide you with quotes from pre-screened solar providers in your area. Once you've done your research, it's time to give your business some structure.
