

Solar water pump disconnects from water and loses power

Overview

Problem: If the PV pump does not run at all, it may be a motor problem or a complete loss of power. **Solution:** Test the motor by checking if it is receiving the correct voltage. If there is no power, trace back to the panel and connections. Solar pump troubleshooting is important to ensure proper operation of the pump system, improve energy efficiency, extend the life of the equipment, and ensure water supply to the user. There are two main divisions of solar pumps: submersible and surface. Each of these can be used for different purposes, and therefore come with their own unique set of problems, so here some of the most common problems (and solutions) you may encounter with your new solar pump. Troubleshooting these problems can often. Solar-powered water pumps are devised to be green, budget-friendly, and reasonable in terms of maintenance; that doesn't mean they would not be exempted from various hiccups.
