

# Spain backup power

## Overview

---

Spain's government is set to mandate that local telecommunications firms such as Telefónica SA and Cellnex Telecom SA install power backup systems to ensure phone and internet services during major disasters. The Iberian Peninsula power outage highlighted the reliance of modern society on electricity when it suffered Europe's largest blackout in years. Such disruptions are likely to become more frequent amid rising demand for electricity, the clean energy transition and extreme climate events. The significant increase in both wind and solar generation capacity is creating the need for storage. Earlier this month, reports suggested Spain was preparing to phase out its nuclear plants.
