

# Super cold-resistant energy storage battery system

## Overview

---

43 MWh battery energy storage system (BESS) at China's Karamay Oilfield, which operates reliably in temperatures as low as  $-40^{\circ}\text{C}$ , thanks to an integrated liquid cooling and heating system. Cold climates no longer hinder modern battery storage. Qstor™ Battery Energy Storage Systems (BESS) from Siemens Energy are engineered to meet these challenges head-on, offering a versatile, scalable, and reliable solution to energize society. When integrated with PV and generators, BESS are the core of resilient microgrids. At EPC Energy, we've engineered. NMC batteries provide high energy density but are more sensitive to temperature extremes and generally less safe in harsh conditions compared to  $\text{LiFePO}_4$ . As winter approaches, the importance of a reliable solar battery becomes clear, especially in colder temperatures. I've tested dozens of batteries in freezing conditions, and the EBL 1100mAh Solar AA Batteries truly stand out.
