

# Swiss small wind power generation system

## Overview

---

This interactive map shows where small and large-scale wind energy plants are in operation in Switzerland, together with their respective capacities and the quantities of electricity they have produced in the past few years. About 62% of Switzerland's electricity generation came from hydro, while renewables-driven and conventional thermal power plants supplied a combined contribution of 9%. Nuclear contributed 29% to the country's electricity production. [4] According to the IEA the electricity use (gross production +). Precise weather forecasts are an important prerequisite for the efficient and economical operation of solar installations and wind farms. One of the reasons why MET Group decided to acquire a 25% stake in SwissWinds was the analysis of the weather and wind situation in Switzerland. Author: Vasilis. Recent advances in wind turbine technology have changed the rules of the game in Switzerland. In the past, a wind speed of around 7 metres per second was required to generate wind energy.

## Swiss small wind power generation system

---

### [Embracing wind power in the solar PV-dominated Swiss landscape](#)

Provides insights for Swiss renewable strategy. The Swiss energy transition, characterized by the nuclear phase-out, relies mainly on the integration of solar photovoltaic (PV), mostly because ...

### [Small wind turbine market in Switzerland: opportunities and threats](#)

Our team has prepared a report that analyzes the development of the small wind market in Switzerland. We invite you to read the article and welcome your comments.

### [Umbrella organization founded for the expansion of small wind](#)

A total of 20 citizens from different regions and professional activities have launched the Swiss umbrella organization for small wind turbines up to 50 meters in height called ...

### [Switzerland is suitable for wind power generation - despite complex](#)

Using the weather statistics, the answer is: Yes, it is worth investing in wind energy in Switzerland too. A supporting fact is that wind power is generated in Switzerland, particularly in ...

### Wind Power , Axpo

Switzerland is still barely exploiting its wind potential - yet up to 10 terawatt hours of wind power could contribute to a secure, renewable energy supply in the future.

### [Switzerland Sets New Wind Power Generation Record in 2024](#)

As energy demands soar and the push for electrification intensifies, the ability to power mid-sized cities entirely through wind demonstrates that the technology is ready to scale, provided ...

### [Electricity sector in Switzerland](#)

The contribution of wind power to Switzerland's electricity supply remains modest compared to other renewables. By 2022, a total of around 87 MW of large-scale wind power capacity was in operation, ...
