

Switzerland electricity distribution

Overview

Switzerland's electricity supply to end-users is secured by more than 600 companies, ranging from small regional suppliers to large international energy groups. The majority of them are public sector entities. Mostly carbon free with hydro (62%) and nuclear (29%). [1] The electricity sector in Switzerland relies mainly on hydroelectricity, since the Alps cover almost two-thirds of the country's land mass, providing many large mountain lakes and artificial. Since the opening of the electricity market at the beginning of 2009, Swissgrid has been receiving various energy data in its capacity as transmission system operator and balance group coordinator. With. intenance of electricity distribution networks across the country. Switzerland's energy market is characterized by a partially liberalised framework that distinguishes it from many European nations, resulting in unique dynamics for DSOs mid ongoing energy crises and rising electricity. The electricity market in Switzerland serves both domestic and international customers. Heavily reliant on water resources for electricity generation, Switzerland produces a surplus of electricity in the summer months but remains a net-import of electricity in the winter months, to satisfy a. The electricity statistics evaluate the production of electricity and the consumption of electrical energy in Switzerland, and compare the findings with those of other countries. A weekly report ("Füllungsgrad der Speicherseen") is published that indicates the water levels of reservoirs in the.
