

# **The ground wire of the photovoltaic grid-connected inverter is charged**

## Overview

---

A grounding wire of 6 AWG must be connected to the grounding terminal on the inverter and connected to a single-point grounding connection wire. Meanwhile, both ground electrodes (AC ground. An SMA product (PV, hybrid, battery or Sunny Island inverter) is part of a PV system in which each component, if connected incorrectly, can affect the system in an undesirable way. This may prevent the intended safety elements, such as surge arrestors on the AC and DC sides and fuses, from. This process involves two distinct but related concepts: system grounding, which connects current-carrying conductors to the earth for voltage stabilization, and equipment grounding, which bonds all metallic components to prevent shock hazards. It protects against electrical shocks, safeguards expensive equipment, and ensures stable performance. not solidly grounded. Therefore, a neutral conductor is not necessary for the export of power.
