

# UK high-frequency inverter device

## Overview

---

All our inverters are supplied with UK sockets. These high frequency modified sinewave inverters are designed for operating simple electrical devices such as lights (non-fluorescent), kettle or heater, essentially items without motors or inductive loads. We develop and produce drive and frequency inverters for controlling drive trains in machines and systems. Frequency inverters What is a frequency inverter?

How does a. Small dimension and light weight thanks to high frequency energy switching conversion. High output peak power (200% of nominal value for 2s). These devices are essential in applications ranging from renewable energy systems to consumer electronics, providing clean and stable power with. When you are travelling and off grid an inverter enables you to operate mains appliances using the energy stored in your batteries.
