Overview

Q: Can UBS units work with existing solar panels?

A: Yes, most modern systems accept DC inputs from 24V to 150V. In short, you can indeed run power to a container – either by extending a line from the grid or by turning the container itself into a mini power station using solar panels. Why power a shipping container?

There are many reasons to supply electricity to a container, especially in off-grid settings. Check each product page for other buying options. RPS supplies the shipping container, solar, inverter, GEL or LiFePo battery bank, panel mounting, fully framed windows, insulation, door, exterior + interior paint, flooring, overhead lighting, mini-split + more customizations! RPS can customize the Barebones and Move-In Ready options to any design. Shipping container solar systems are transforming the way remote projects are powered. These innovative setups offer a sustainable, cost-effective solution for locations without access to traditional power grids. Take modular battery architecture – imagine Lego-like power blocks that let users scale capacity on demand.
