

Utilization of Photovoltaic Panel Waste

Overview

This paper presents a structured narrative review of recent literature on sustainable SPV waste management. When solar panels, which typically have a lifespan of more than 25 years, reach the end of their lives and become a waste stream, they must be managed safely. Global capacity surpassed the terawatt scale in 2022 and is projected to exceed 14 TW by 2050, generating more than 70 million tonnes of cumulative waste. If not properly. Solar panels convert solar energy into electricity through solar cells (also known as photovoltaic cells). Solar panels sometimes contain toxic metals, which means they may be subject to the Dangerous Waste Regulations, chapter 173-303 WAC. Modern recycling facilities can recover between 85 and 95 percent of a panel's.
