

# What are the disadvantages of monocrystalline silicon photovoltaic panels

## Overview

---

Here are some of the disadvantages of monocrystalline solar panels: They are the most expensive solar cells on the market, so not in everyone's price range. The performance levels tend to suffer from an increase in temperature. However, it is a small loss when compared to other. However, their high manufacturing cost and reduced performance under diffuse light can be limitations. However, they're not without drawbacks.
