

# What is a home energy storage device

## Overview

---

Home energy storage refers to residential energy storage devices that store electrical energy locally for later consumption. Usually, electricity is stored in lithium-ion rechargeable batteries, controlled by intelligent software to handle charging and discharging cycles. Yet as energy demand accelerates and grid infrastructures face mounting pressure, reliability is no. With energy costs on the rise and renewable adoption accelerating, more homeowners are asking: How can I store the power I generate?

The answer lies in home energy storage.
