## Overview

---

A flow battery, or redox flow battery (after ), is a type of where is provided by two chemical components in liquids that are pumped through the system on separate sides of a membrane. inside the cell (accompanied by current flow through an external circuit) occurs across the membrane while the liquids circulate in their respective spaces.

A flow battery, or redox flow battery (after reduction-oxidation), is a type of electrochemical cell where chemical energy is provided by two chemical components dissolved in liquids that are pumped through the system on separate sides of a membrane. Ion transfer inside the cell (accompanied by current flow through an external circuit) occurs across the membrane while the liquids circulate in their respective spaces.

A promising technology for performing that task is the flow battery, an electrochemical device that can store hundreds of megawatt-hours of energy--enough to keep thousands of homes ...

### Flow battery

The fundamental difference between conventional and flow batteries is that energy is stored in the electrode material in conventional batteries, while in flow batteries it is stored in the electrolyte.

### [Flow Batteries: The Future of Energy Storage](#)

Flow batteries are rechargeable batteries where energy is stored in liquid electrolytes that flow through a system of cells. Unlike traditional lithium-ion or lead-acid batteries, flow batteries offer ...

### [What is a Flow Battery? Overview of Its Role in Grid-Scale Energy Storage](#)

The U.S. Department of Energy defines flow batteries as "rechargeable batteries that store energy in liquid electrolyte solutions, allowing for flexible and long-duration energy storage."

### [What Are Flow Batteries? A Beginner's Overview](#)

A flow battery is a type of rechargeable battery that stores energy in liquid electrolytes, distinguishing itself from conventional batteries, which store energy in solid materials.
