

What size inverter is suitable for 16kW photovoltaic

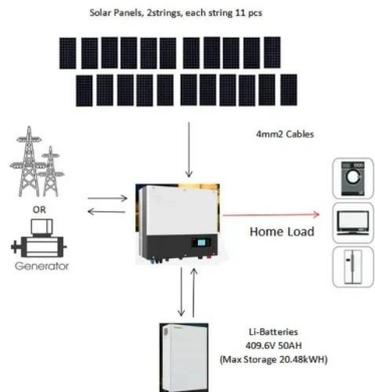

Overview

Most solar professionals recommend sizing your inverter for solar panels between 75% and 115% of your total panel wattage, with the sweet spot around 1:1. Choosing the right solar inverter size is critical—and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means. Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. Getting the size right means the difference between 95% efficiency and 70% efficiency, which translates to hundreds of dollars in lost energy production every. Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity.
