

# Which glass glue is suitable for photovoltaic panels

## Overview

---

The type of glass glue used for solar panels is typically silicone or polyurethane based, ensuring flexibility, durability, and resistance to environmental changes. These adhesives provide excellent bonding strength, facilitate shock absorption, and withstand temperature variations while. It bonds securely to surfaces like glass, ceramics, and even stone, making it perfect for solar panel repairs or mounting. Compared to the Weldbond Multi-Surface Adhesive, which is larger and costs a bit more, the all-purpose version offers the same high-quality bonding in a more convenient size. They help solar panels deal with changes in temperature and movement. Silicone adhesives: These adhesives keep out water and block UV rays. Most solar panels are under warranty, and the standard warranty is generally for 25-years.
