

Which year will photovoltaic panels be the cheapest

Overview

In 2025, residential and commercial solar panels are more affordable and effective than ever, enabling homeowners and businesses to harness the sun's energy with substantial financial and environmental benefits. Yes, solar panels are still worth it for the vast majority of U. homeowners in 2026 and beyond, despite the end of the 30% federal solar tax credit for some systems. A federal incentive expanded in 2022 through the Inflation Reduction Act can offset 30% of the cost of a. As of 2026, the average cost of residential solar panels in the U. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2. 50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type. From 2010 onwards, solar photovoltaic (PV) module prices experienced substantial reductions, making solar power increasingly accessible.
