

Will the price of photovoltaic panels continue to rise

12.8V 200Ah

Overview

Wood Mackenzie's October 2025 analysis confirms that PV module prices are jumping approximately 9% in Q4 2025, with further increases expected through 2026. It represents a structural market correction that will reshape solar procurement strategies. Somewhere in the tumult of the global economy in recent months, solar panel prices hit bottom and then began to rise. The global solar module industry is expected to regain a sustainable balance in the next six months, Yana Hryshko, head of Solar Supply Chain Research for Wood Mackenzie, told pv magazine. She explains why solar module prices may increase soon, suggesting that Tier 1 modules prices could reach. Though prices are rising, they remain relatively affordable compared to historical levels. Analysts predict that this trend will persist throughout the year, prompting questions about the future of solar energy costs and demand. To protect margins, lock in pricing early, diversify suppliers, and adopt high-efficiency HPBC and ABC modules. Data source: IRENA (2025); Nemet (2009); Farmer and Lafond (2016) - Learn more about this data Note: Costs are expressed in constant 2024 US\$ per watt. Global estimates are used before 2010; European market. However, potential future tariffs on imported solar panels and the uncertainty surrounding tax credits could introduce price volatility, necessitating strategic planning for both buyers and sellers in the B2B e-commerce space 9. Record-low prices and increased deployment: Solar panel costs reached.
