

# Wind and water power generation

## Overview

---

Not only do AWE devices generate power, but also utility scale water. The beauty is that AWE systems can be installed virtually anywhere power or water is needed. It's a radically unique, efficient, and a practical method of harnessing the power of wind. Water power technologies harness energy from rivers and oceans to generate electricity for the nation's homes and businesses, and can help the United States meet its pressing energy, environmental, and economic. Wind power is the use of wind energy to generate useful work. Historically, wind power was used by sails, windmills and windpumps, but today it is mostly used to generate electricity. Today, wind power is generated almost. Abilene-based Natura Resources, which won the first federal construction permit for a liquid-fueled molten-salt reactor in 2024, will work with NGL Water Solutions Permian to explore deploying its 100-MWe reactor design alongside thermal desalination systems to transform briny drilling waste into.
